NOTICE TO ALL BIDDERS:

The following shall be incorporated in and become a part of the original Drawings and Specifications of the above identified project. Please acknowledge receipt of this Addendum by noting it on your Proposal.

MECHANICAL ITEMS:

- Item M1 Sheet M0.04 – A duct smoke detector is indicated on the control diagrams. The new RTU is less than 2000 cfm and does not require a duct detector. However, complete control replacement is scheduled for the two split system air handlers (AHU-11 and AHU-12) serving the cafeteria which include duct detectors. These two duct detectors should be included in the contractor’s scope of work. Please also note that, per M0.04, the BAS system is required to monitor the general fire alarm input for the campus. This may require coordination between the fire alarm subcontractor and the BAS subcontractor.
- Item M2 Sheet M2.00 – Additional information has been requested on the existing JACE controller that is to be replaced by the scope of this project:
The existing JACE has the following specs:
- IP Address: 10.178.88.251
 - Platform: AX
 - Hardware: NPM6E (also known as JACE-6)
 - Niagara OS: 3.5.39
 - It is located in the mezzanine above Library Storage 125.
- Item M3 Sheet M2.00 – It was asked how many LON devices are on the existing DDC controls network? There are 18 units shown to be integrated in some manner onto the new network in addition to establishing the 4 timeclock zones. The existing Tridium front-end shows sixteen (16) nodes in use.
- Item M4 Sheet M2.00 – It was asked where the time clock controller located that is mentioned on drawing M2.00 Note #4? The existing timeclock is located in a mechanical room near

the kitchen/dock area. Project scope shall include locating the relays as necessary and extend the LAN network as required to establish the four timeclock zones.

ELECTRICAL ITEMS:

- Item E1 Sheet E2.01 – The switching for the Multipurpose Classroom lighting has been revised to provide switching of the four rows of suspended light fixtures into two groups. One group of two rows on the northeast side of the room and another group of two rows on the southwest side of the room. This will allow the two rows of four fixtures near the window wall to be turned off / dimmed while the other two rows of four fixtures can be on. This shall be done using Acuity nLight lighting control components including two single gang devices that accomplish the same function: one single gang box at the entrance to the classroom's vestibule (from the corridor) and one single gang device at the entry to the classroom itself. Either of the two devices will provide control to the classroom as described above. Refer to attached revised drawing E2.01.
- Item E2 Sheet E4.01 – Refer to Addendum item M1 above. The fire alarm subcontractor shall provide the duct detectors required for AHU-11 and AHU-12 serving the cafeteria. Additionally, the fire alarm subcontractor shall provide the general fire alarm relay to be monitored by the BAS.

PLUMBING ITEMS:

- Item P1 Specification Section 224000, 2.1 – Change the flush rate requirement of WC'A' to 1.28 gpf. Sloan Valves will not provide a 1.1 manual flush valve due to concerns about drainline transport of solid waste in buildings.
